1. Executive Summary

The National Bank of Fujairah's ("NBF" or the "Bank") Basel Pillar 3 disclosures have been prepared in accordance with the guidelines prescribed by the Central Bank of the UAE (CBUAE) and the Formal Disclosure Policy of the Bank. The Bank and its subsidiaries are together referred to as 'the Group' in this document.

The purpose of this report is to inform market participants of the key components, scope and effectiveness of the Bank's risk measurement processes, risk profile and capital adequacy. This is accomplished by providing consistent and understandable disclosures of the Bank's risk profile in a manner that enhances comparability with other financial institutions.

Capital management and risk management are important parts of the Bank's strategy formulation process and are reflected in the Bank's long-term objectives. The primary objective of the NBF's capital and risk management strategy is to protect the financial strength of the Bank, ensure its sustainability and safeguard its reputation, whilst recognizing that prudent risk taking remains an integral part of NBF's business. The NBF risk management strategy applies across all businesses and risk categories and is based on the principles of:

- Transparency, assessment and responsiveness, and
- Management accountability.

Capital Management

The Bank's Capital Position shows that the Group holds adequate capital.

CAPITAL ADEQUACY ASSESSMENT SUMMARY AED'000		
Particulars	**Sep '26**	**Dec '25**
	Regulatory Capital Pillar I	**Regulatory Capital Pillar I**
Risk Weighted Assets (RWA)	47,303,053	45,934,427
Mandated Capital @ 13%*	6,149,397	5,971,476
Available Capital	8,279,256	7,350,535
Surplus / (Shortfall)	2,129,859	1,379,059
Capital Adequacy Ratio	17.50%	16.00%

*Mandated Capital including buffers is 13% of Total RWA.

CET 1 CAPITAL ADEQUACY ASSESSMENT SUMMARY AED'000		
Particulars	Sep '26	Dec '25
	Regulatory Capital Pillar I	Regulatory Capital Pillar I
Risk Weighted Assets (RWA)	47,303,053	45,934,427
Mandated CET1 @ 9.50% (Incl. buffers)	4,493,790	4,363,771
Available Capital	7,751,505	6,836,508
Surplus / (Shortfall)	3,257,715	2,472,737
CET 1 Ratio	16.39%	14.88%

The results of the capital assessment indicate that the targets and triggers in place to manage capital adequacy are appropriate.

The Management Risk Committee, through the Asset and Liability Committee (ALCO), reviews the level of capital resources in relation to the changes in the risk profile of the Bank, the results of the stress testing and the business expansion which impacts capital each month. The Committee makes appropriate recommendations to the Board Risk and Sustainability Committee and the Board of Directors regarding additional capital requirements.

Risk Management

The Board provides a clear operational structure for the Group to manage risk in a manner that ensures the establishment of appropriate controls consistent with the Bank's risk appetite, risk profile and capital strength. These controls, via the Enterprise-wide Risk Management Framework (ERMF), are understood by and regularly cascaded to relevant staff.

The ERMF promotes continuous monitoring and the integrated evaluation of different risk types and their interaction, to assess the enterprise–wide overall risk profile.

NBF examines its risk profile from a regulatory capital and economic capital perspective to ensure its capital base remains above the minimum regulatory threshold, is adequate to withstand certain defined stress scenarios and is sufficient to support NBF's strategic objectives and operational goals.

This Pillar 3 Report provides details on the Bank's risk profile by risk asset classes, which form the basis for the calculation of its capital requirement. Numbers are stated in AED thousands unless stated otherwise.

2. Table KM1: Key metrics (at consolidated group level)

The key metrics focus on the capital and liquidity position of the Bank:

The Bank's lead regulator, the Central Bank of the UAE, sets and monitors regulatory capital requirements. The requirements of capital for subsidiaries, NBF Financial Services FZC and NBF Markets (Cayman) Limited, are determined by the Free Zone Authority of Fujairah and Cayman Island Government General Registry respectively.

The Group's objectives and strategy when managing capital are:

- To maintain an adequate level and achieve an optimum structure for the Group's capital commensurate with its strategy, risk profile and relative positioning in the market;
- To comply with regulatory capital requirements set by the Central Bank of the UAE;
- To safeguard the Group's ability to continue as a going concern and to optimise returns for shareholders;
- To efficiently allocate capital to various businesses and to optimise risk and reward;
- To ensure effective internal organisation and processes and to assess and manage material risks on an ongoing basis; and
- To provide for any unforeseen losses.

The Group's capital management is carried out centrally and determines the level of risk weighted asset growth and the optimal amount and mix of capital required to support planned business growth.

In implementing capital requirements, the Bank calculates its capital adequacy ratio in accordance with the 'Capital Adequacy Regulations' issued by the Central Bank of the UAE. The Central Bank of the UAE introduced the implementation of Basel III reporting which the Group has adopted and has also developed and implemented risk management measurement tools and robust practices to be compliant with the Basel III Standardised approach. The Central Bank of the UAE places considerable emphasis on the Internal Capital Adequacy Assessment Process ("ICAAP") and the Group has aligned its policy framework and ICAAP in compliance with the Central Bank of the UAE requirements.

The Bank and its subsidiaries have complied with all regulatory capital requirements throughout the period.

Regulatory Capital

The Bank's risk weighted assets (RWA) are weighted on the basis of relative credit, market, and operational risks. Credit risk includes both on and off balance sheet risks. In accordance with the Basel III Compliance – Standardized Approach, the Bank is following the standardized measurement approach for credit, market and operational risk, under the existing Pillar 1 of Basel III requirements with the addition of the respective changes pertinent to capital supply.

The quantitative requirements, based on the regulations and guidelines, have been detailed below:

i. Total regulatory capital (net of regulatory adjustments) – at least 10.50% of risk weighted assets (RWA) – comprises of two tiers:

   a. Tier 1 capital – at least 8.50% of RWA, composed of:

      - Common equity Tier 1 (CET1) – at least 7.00% of RWA; and
      - Additional Tier 1 (AT1).

   Common equity Tier 1 (CET1) includes ordinary share capital, statutory reserve, special reserve, retained earnings and fair value reserves relating to unrealized gains on investments classified as fair value through other comprehensive income (FVOCI) / available for sale with a haircut of 55%; and Additional Tier 1 (AT1) comprises of Tier 1 capital securities.

   b. Tier 2 capital

   It includes collective impairment provision and subordinated facilities. Collective impairment provision, including impairment reserve general, shall not exceed 1.25% of total credit risk weighted assets.

ii. Banks must maintain a Capital Conservation Buffer (CCB) of 2.50% of RWA in the form of CET1 capital. CBUAE may also require banks to implement Countercyclical Buffer (CCyB), to protect the banks from periods of excess aggregate credit growth. CCyB must be met by using CET1 capital and the level may vary between 0 and 2.50% of RWAs.

Minimum capital requirements - Central Bank of the UAE:

Capital element	**Basel III 2026**
Minimum common equity tier 1 ratio	**7.00%**
Minimum tier 1 capital ratio	**8.50%**
Minimum capital adequacy ratio	**10.50%**
Capital conservation buffer	**2.50%**

Capital Stress Testing:

The Group carried out and submitted to the Central Bank of the UAE stress testing exercise in accordance with the macroeconomic and business scenarios prescribed by the Central Bank of the UAE through its related guidelines. The results also included the mitigation plan / management action in response to the impact of the stress scenario on the capital adequacy of the Group. The Group passed the Central Bank of the UAE stress test.

The stress testing exercise achieves the following objectives:

- It provides a forward-looking assessment of risk under a stressed scenario;
- It assesses the impact of various Macroeconomic Variables on UAE markets and the bank;
- It elaborates the methodologies, and the assumptions undertaken in the process;
- It assists the Group to shape its strategy, by gauging the capital impact of the stress scenarios;
- It enables the Group to assess extreme risk scenarios, along with contingency plans for such events; and
- It ensures senior management and the Board of Directors have sufficient information to facilitate contingency planning.

Capital Allocation:

The Group also assesses its capital requirements taking into consideration its growth and business plans, and quantifies its regulatory, risk and economic capital requirements within its integrated ICAAP Framework. Risks such as residual risk, concentration risk, liquidity risk, interest rate risk in banking book (IRRBB), settlement risk, reputational risk, strategic risk, money laundering and cyber risk form part of ICAAP quantification.

3. Table OV1: Overview of RWA

Market risk	**77,082**	**112,187**	**8,094**
Of which: standardised approach (SA)	77,082	112,187	8,094
Of which: internal models approach (IMA)	-	-	-
Operational risk	**5,005,926**	**4,924,449**	**525,622**
Amounts below thresholds for deduction (subject to 250% risk weight)	-	-	-
Floor adjustment	-	-	-
Total	**47,303,053**	**45,876,417**	**4,966,821**

NBF is principally exposed to credit risk which represents almost 89.25% of the Bank's Risk Weighted Assets followed by operational risk which accounts for around 10.58% of Risk Weighted Assets. The Bank has a relatively small market risk exposure as reflected in its risk weighted assets. The increase in CVA RWA primarily reflects a higher number of outstanding transactions as at the reporting date, with the overall impact remaining immaterial.

4. Table LR1: Summary comparison of accounting assets vs leverage ratio exposure

		AED '000
		Sep '26
		A
1	Total consolidated assets as per published financial statements	71,138,290
2	Adjustments for investments in banking, financial, insurance or commercial entities that are consolidated for accounting purposes but outside the scope of regulatory consolidation	-
3	Adjustment for securitised exposures that meet the operational requirements for the recognition of risk transference	-
4	Adjustments for temporary exemption of central bank reserves (if applicable)	-
5	Adjustment for fiduciary assets recognised on the balance sheet pursuant to the operative accounting framework but excluded from the leverage ratio exposure measure	-
6	Adjustments for regular-way purchases and sales of financial assets subject to trade date accounting	-
7	Adjustments for eligible cash pooling transactions	-
8	Adjustments for derivative financial instruments	645,414
9	Adjustment for securities financing transactions (ie repos and similar secured lending)	-
10	Adjustments for off-balance sheet items (ie conversion to credit equivalent amounts of off-balance sheet exposures)	11,455,729
11	Adjustments for prudent valuation adjustments and specific and general provisions which have reduced Tier 1 capital	-
12	Other adjustments	(1,048,968)
13	**Leverage ratio exposure measure**	**82,190,465**
